

OPEN SCIENCE

CIÊNCIA ABERTA

DEFINIÇÃO

PRÁTICA CIENTÍFICA COLABORATIVA, TRANSPARENTE E ACESSÍVEL, VISANDO AUMENTAR A CONFIABILIDADE, A REPLICABILIDADE E O IMPACTO DA PESQUISA

Acesso Aberto	• Disponibilização de artigos, dados e outros resultados de pesquisa para o público em geral.
Dados Abertos	• Compartilhamento de dados de pesquisa para que outros pesquisadores possam reutilizá-los.
Métodos Abertos	• Compartilhamento de métodos e protocolos de pesquisa para promover a transparência e replicabilidade.
Avaliação Aberta	• Processos transparentes de revisão por pares.
Colaboração Aberta	• Fomento de colaborações entre pesquisadores de diferentes áreas e instituições.

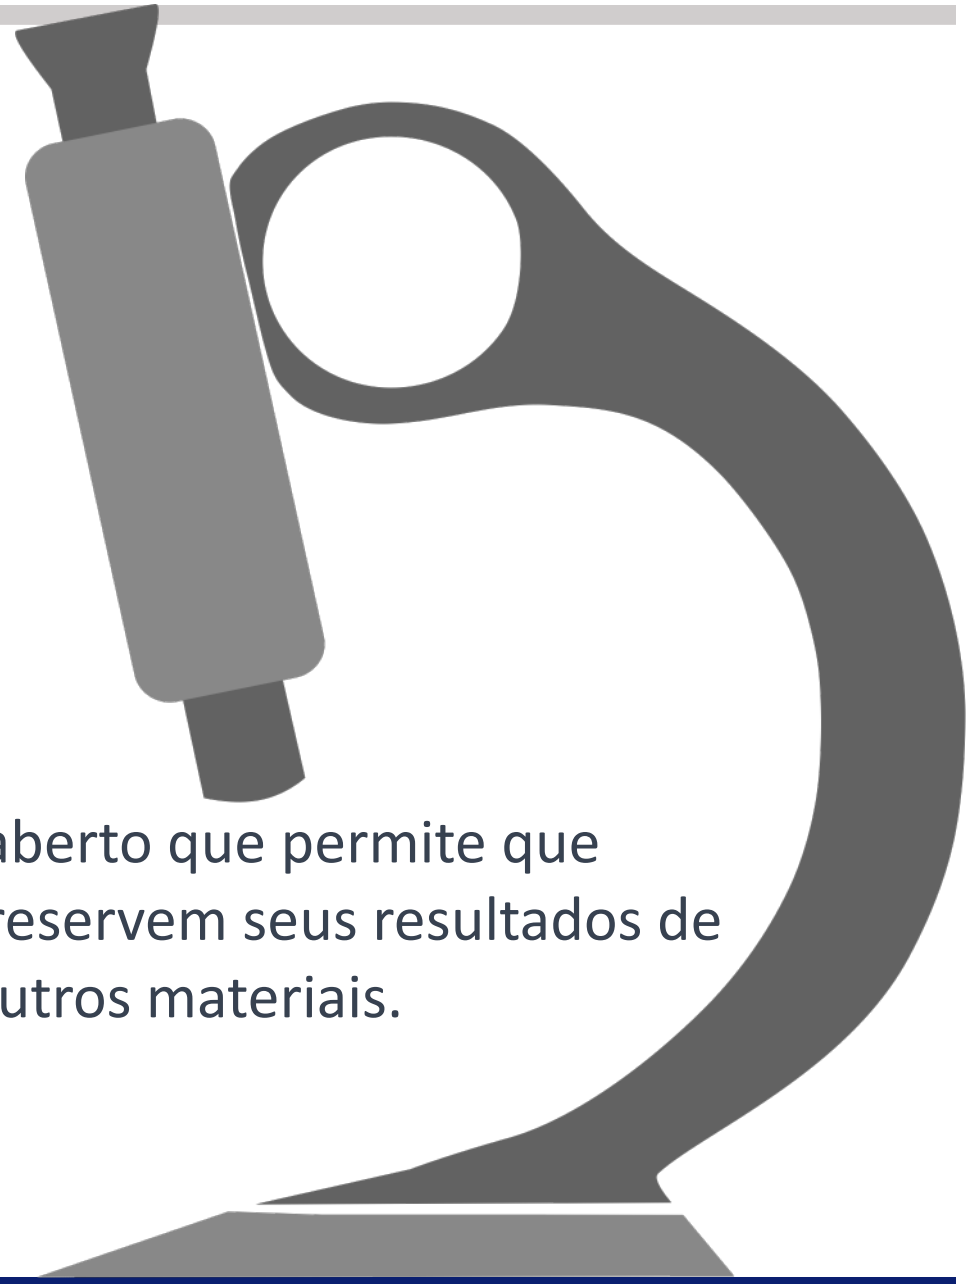

- Facilita a colaboração entre pesquisadores
- Aumenta a visibilidade e o impacto da pesquisa
- Promove a inovação ao permitir que outros utilizem e expandam os resultados de pesquisa
- Contribui para a confiabilidade e validade da ciência ao permitir a replicação de estudos

- Questões de privacidade e propriedade intelectual
- Desafios relacionados ao armazenamento e compartilhamento de grandes volumes de dados
- Necessidade de padronização de formatos e métodos para facilitar o compartilhamento de dados

HÁ FERRAMENTAS E PLATAFORMAS QUE FACILITAM A PRÁTICA DA CIÊNCIA ABERTA, COMO REPOSITÓRIOS DE DADOS E CÓDIGO, PLATAFORMAS DE ACESSO ABERTO

ZENODO

O que é o Zenodo:

1. O Zenodo é um repositório de pesquisa de acesso aberto que permite que pesquisadores de qualquer área compartilhem e preservem seus resultados de pesquisa, incluindo publicações, dados, figuras, e outros materiais.

Como o Zenodo funciona:

1. Os pesquisadores podem fazer upload de seus materiais de pesquisa, que são então disponibilizados para o público em geral.
2. O Zenodo atribui um DOI (Digital Object Identifier) a cada publicação, facilitando a citação e o rastreamento do material.
3. Os materiais são armazenados em um ambiente seguro e preservados a longo prazo.

Benefícios do uso do Zenodo:

1. Aumenta a visibilidade e o impacto da pesquisa ao torná-la acessível para um público mais amplo.
2. Facilita a colaboração entre pesquisadores, já que os materiais podem ser facilmente compartilhados e reutilizados.
3. Contribui para o cumprimento dos requisitos de financiadores e editores em relação ao acesso aberto e à preservação de dados.

Integração com outras ferramentas:

1. O Zenodo é integrado com outras ferramentas e plataformas utilizadas por pesquisadores, como o GitHub, o que facilita o compartilhamento e a preservação de softwares e códigos de pesquisa.

About Zenodo

Passionate about Open Science!

Built and developed by researchers, to ensure that everyone can join in Open Science.

The OpenAIRE project, in the vanguard of the open access and open data movements in Europe was commissioned by the EC to support their nascent Open Data policy by providing a catch-all repository for EC funded research. CERN, an OpenAIRE partner and pioneer in open source, open access and open data, provided this capability and Zenodo was launched in May 2013.

In support of its research programme CERN has developed tools for Big Data management and extended Digital Library capabilities for Open Data. Through Zenodo these Big Science tools could be effectively shared with the long-tail of research.

Open Science knows no borders!

The need for a catch-all is not restricted to one funder, or one nation, so the concept caught on, and Zenodo rapidly started welcoming research from all over the world, and from every discipline.

The digital revolution has necessitated a retooling of the scholarly processes to handle data and software, but this is proceeding at varying speeds across different communities, disciplines, and nations. To ensure no one is left behind through lack of access to the necessary tools and resources, Zenodo makes the sharing, curation and publication of data and software a reality for all researchers.

Every last detail

To fully understand and reproduce research performed by others, it is necessary to have all the details. In the digital age, that means all the digital artefacts, which are all welcomed in Zenodo.

To be an effective catch-all, that eliminates barriers to adopting data sharing practices, Zenodo does not impose any requirements on format, size, access restrictions or licence. Quite literally we wish there to be no reason for researchers not to share!

Data, software and other artefacts in support of publications may be the core, but equally welcome are the materials associated with the conferences, projects or the institutions themselves, all of which are necessary to understand the scholarly process.

Don't wait until the publication date!

Publication may happen months or years after completion of the research, so collecting together all the esearch artefacts at that stage to publish openly is often challenging. Zenodo therefore offers the ibility to house closed and restricted content, so that artefacts can be captured and stored safely e research is ongoing, such that nothing is missing when they are openly shared later in the rkflow.

n publishing, research materials for the review process can be safely uploaded to Zenodo nd then protected links can be shared with the reviewers. Content can also be ally opened when the associated paper is published.

The name

Zenodo is derived from Zenodotus, the first librarian of the Ancient Library of Alexandria and father of the first recorded use of metadata, a landmark in library history.

Open in every sense

Zenodo code is itself open source, and is built on the foundation of the Invenio digital library which is also open source. The work-in-progress, open issues, and roadmap are shared openly in GitHub, and contributions to any aspect are welcomed from anyone.

All meta data is openly available under CC0 licence, and all open content is openly accessible through open APIs.

Open to all suggestions for new features, via GitHub, and especially open to all contributions of code via pull requests!

MiMoTextBase RDF Dump

Bremm, Matthias; Duan, Tinghui; Hinzmann, Maria

This is the RDF-Dump of the knowledge graph "MiMoTextBase" created within the project "Mining and Modeling Text" (2019-2023, MiMoText) at the University Trier. As the project focusses on French Enlightenment novels, the MiMoTextBase - a wikibase instance - contains items on novels and their respective authors of the years 1751-1800. The...

Why use Zenodo?

- **Safe** — your research is stored safely for the future in CERN's Data Centre for as long as CERN exists.
- **Trusted** — built and operated by CERN and OpenAIRE to ensure that everyone can join in Open Science.
- **Citeable** — every upload is assigned a Digital Object Identifier (DOI), to make them citable and trackable.
- **No waiting time** — Uploads are made available online as soon as you hit publish, and your DOI is registered within seconds.
- **Open or closed** — Share e.g. anonymized clinical trial data with only medical professionals via our restricted access mode.
- **Versioning** — Easily update your dataset with our versioning feature.
- **GitHub integration** — Easily preserve your GitHub repository in Zenodo.
- **Usage statistics** — All uploads display standards compliant usage statistics

Rethinking a national classification system of research and graduate education

Brasil, André

This study investigated the Brazilian classification system for research and graduate education. The motivations behind the system design were examined, as well as some central factors in its evolution and expansion. From this, it was possible to identify that the current system became somewhat peculiar in its distinctions from international cla...
